

Automatic DC Power Supply/Battery Charger

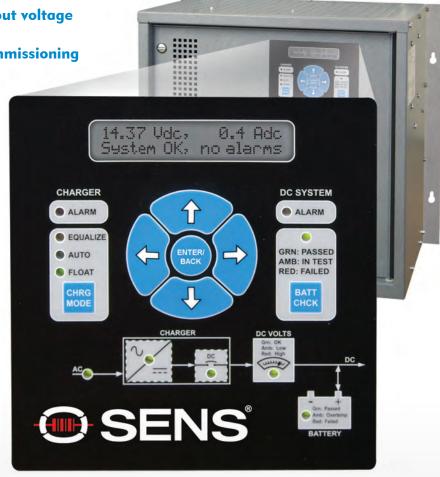

NEW in 2015:

• Field selectable AC input voltage in high-powered units

 Automatic battery commissioning mode

Built-in intelligence makes it easy to correctly configure charger for battery and site conditions Battery check system automatically tests battery to reduce risk of unexpected application shutdown Black box data recorder helps spot previously hidden problems and direct preventive maintenance Advanced user interface, USB PC utility provide easy to understand system status and control Dual microprocessors, digital load sharing minimize risk of single point failure Modbus communication option provides remote monitoring, administration

Made In U.S.A.

Consulting - Specifying Engineer 2009 Product of the Year

Rugged utility-grade charger

c UL listed, CE Marked

Filtered output

Temperature compensation

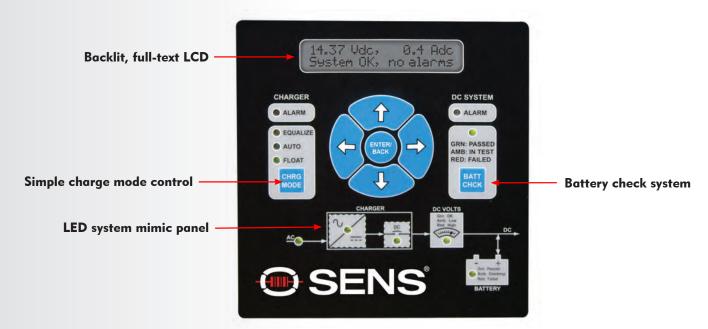

Optional Modbus data communications

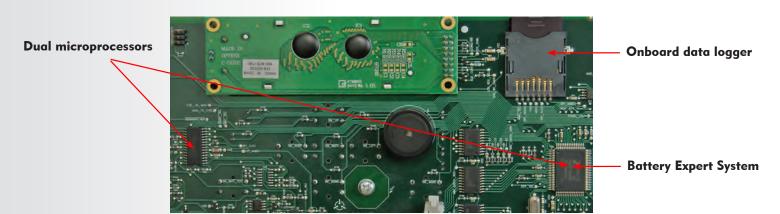

ostional OSHPD pre-approval

ABS Type Approved.

Meets USCG requirements when installed with IP22 drip shield

All-digital design – no potentiometers

Constant Voltage, Current Limited, Filtered Battery Charger

Refineries and chemical plants
DC control systems
Engine starting

Oil and gas pipelines
Offshore platforms

Electric utility substations Switchgear

EnerGenius IQ is a rugged utility-grade battery charger/rectifier with microprocessor control.

EnerGenius IQ delivers DC power and charges your battery, automatically tests battery performance, logs all relevant site data and clearly communicates results. An all-new charge control system reduces recharge time and cuts risk of overcharge.

Key Features

Constant voltage, current limited and filtered DC output

Simultaneously supplies smooth DC to critical loads, recharges the connected system battery and automatically maintains flooded lead-acid, VRLA, or nickel-cadmium batteries in peak condition.

Dynamic Equalize Charge™ safely maximizes recharge performance while cutting risk of overcharge.

Dynamic Equalize automatically adapts to each application in real time by compensating for depth of discharge, varying load, battery age and other variables.

Integrated battery check system cuts risk of undetected battery failure

Lead-acid batteries frequently fail without warning. The on-board battery check system determines if your battery can support a connected continuous load without taking the battery offline or shutting down the charger.

Black box recorder discovers hidden battery and site data to direct preventive action

Data recorder captures and logs previously unavailable system and site data necessary to analyze failures and demonstrate if site conditions are harming battery life. Users can leverage this knowledge to improve reliability of battery sites throughout their networks.

Dual microprocessors minimize risk of single point failure

Dual microprocessors provide internal fault tolerance, and provide a level of system reliability superior to either conventional analog or single microprocessor-controlled chargers.

Optional multi-function communications module extends the IQ's capabilities to the network

CommsGenius provides Modbus networking (RS-485 and Ethernet), precise digital load sharing for two chargers, and PC-based charger setup & administration.

Maximizes DC system reliability at lowest total cost

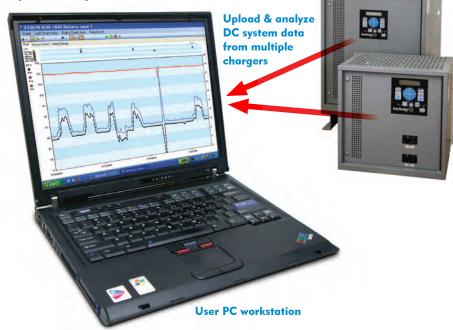

On-board Information Technology Takes System Reliability to a New Level

- Battery check system
- Industry-first "black box" data logger

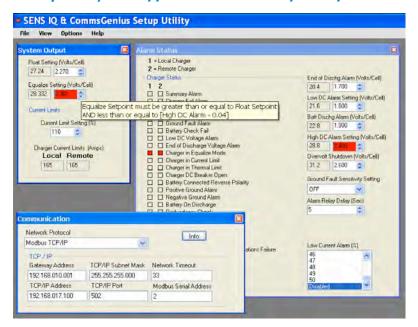

Standby batteries have limited lifetimes and typically fail without warning – causing costly application shutdown. SENS EnerGenius IQ integrates battery checking and system data logging functions into the charger, making DC system health assessment less costly and easier to use than ever before.

Insight GUI application makes history data easy to understand

SENS Insight is a PC-based application that converts charger history data into easy-to-understand charts and tables. Insight helps you to see and compare a variety of different analog and digital information. Understanding this information helps avert system downtime, and is essential in performing root cause diagnosis of system problems.

Setup Utility GUI application makes setup a snap

SENS Setup Utility is a PC-based application that communicates with the charger over USB. It is included with the Modbus communications option and the forced load share & remote temperature compensation package.

Setup Utility's GUI makes communications parameter setup easier than ever before, and enables deployment of pre-programmed standard voltage and alarm settings to multiple chargers, as might be required across a fleet of chargers.

"Std" = standard feature. "--" = not available. "Factory option": factory installed option only. "Optional": Feature can be installed in the system at any time. (1) Lowest cost package. (2) Specify for lower output ripple. (3) Adds reverse polarity protection and blocking diodes to Eliminator package. (4) Specify for sites with heavier electrical transients and/or where AC supply is of low impedance. (5) "On battery" ripple measured at the terminals of a battery rated in AH > 4 times charger's amp rating. "Off battery" ripple measured at the load end of charger output cables. (6) On units rated < 3.4 KW output. Higher power units require either field selectable 208/240 input or single input voltage. See last page for details. (7) Only available in larger Q2 housing. (8) Requires Extended Individual Form C Relays package (Option B in Section F on Page 7). Relay rating is 60W @ 117 VAC. (9) Requires Remote Alarms & Communications Feature Package L, K, M or N (see Section F on Page 7). (10) Listed to UL 1012 and CSA 22.2 No. 107.2. Listing to UL 1236 is special order option for 12 and 24 volt chargers. (11) Wall-mount units only. (12) Requires optional IP22 dripshield to meet USCG requirements.

Specify the EnerGenius IQ System Best For Your Needs

Follow these simple steps to specify the correct charger model number:

Choose the right output voltage to suit your battery

Nominal charger volts	Lead-acid battery	Nickel-Cadmium battery
12	4-6 cells	6-10 cells
24	8-12	12-20
48	16-24	25-38 (25-40)
110-120	40-60	64-93 (64-96)
220-240	80-120	128-185 (128-192)

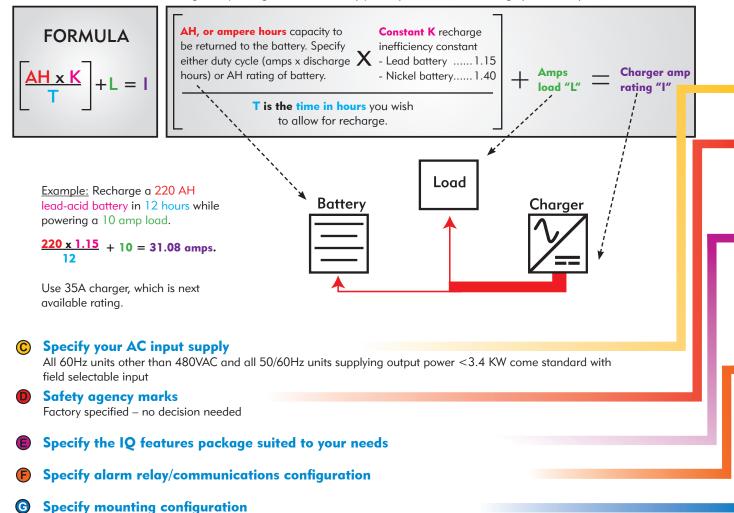

Cells in (parentheses) indicate lower maximum per-cell charging voltages

B Choose the correct output current rating

Use formula to solve for charger amp rating to simultaneously power your load and recharge your battery

Specify optional accessories as needed to complete your system

Specify battery type and number of cells

How To Order

(1) Activates on any alarm listed under Footnote #3. (2) AC fail, charger fail, low DC volts, high DC volts, ground fault. (3) AC fail, charger fail, low DC volts, high DC volts, end of discharge, ground fault, battery check fail. (4) Enables remote reading of all alarms & analog values. Ethernet and RS-485 interfaces. RTU and ASCII modes.

Relay rack mount (factory installed option only)

NOTE: When dual charger configurations are set up for forced load share only 1 ea. charger may be equipped with the CommsGenius card. One CommsGenius supports load share, RTS and Modbus function in both chargers.

(f) Optional features not shown above

Freestanding, floor-mounting housing (size Q2 only): Order p/n 209399

- Drip shield: Order 209320 for IP21 Q1, 209321 for IP21 Q2, 209324 for IP22 Q1, or 209325 for IP22 Q2
- Optional charger packaging: relay racks or cabinets (NEMA 1 and NEMA 3R). Contact factory.

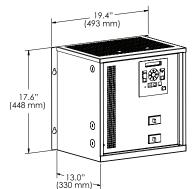

Specify battery type and number of cells

• Flooded lead-acid **VRLA** Ni-Cd (specify number of cells in Ni-Cd battery)

 $[\]ensuremath{^{\alpha}}$ Indicates standard input voltage configuration. Standard input voltage configuration for 50/60 Hz units is either field selectable 120/208/220-240 VAC or 230 volts. Circuit breaker ratings are identical for field selectable units. 400 VAC, 50/60 Hz is available on special order. ^b Current ratings shown are for respective input voltages. Current consumption at nominal input voltage is 8-13% less than worst case value shown, depending on model. ^c Numbers in black show AC input breaker ratings that correspond to input voltage options. Number in blue shows DC output breaker rating.

Housing Dimensions

Housing size Q1 Wall mount configuration (19" rack mount also available)

Housing size Q2 Wall mount configuration (add 3.75" [95.25 mm] height for free-standing option) (23" rack mount also available)

The future of reliable DC power
